Alex Fallas

thealexfallas@gmail.com · www.sayhitoalex.com · linkedin/in/sayhitoalex · San Francisco Bay Area

My career has taken me from games and communication to consumer AI, autonomous systems, and robotics. I like finding the human problem inside complicated technology, inventing a better way to interact with it, and getting people behind an idea worth building. I lead product direction and design teams, but I still believe in making things to prove a point.

EXPERIENCE

Amazon Web Services, Applied AI Solutions | 2025-Present

Principal product designer

Leading design across physical AI for autonomous vehicles and robotics, alongside the evolution of Amazon WorkSpaces into an agentic computing platform.

- Reworked how product, design, and engineering teams make decisions, collaborate with customers, and ship. Helped a team reduce development from a historical six-month cycle to one month for a current feature, establishing a working model that other teams are beginning to adopt.
- Reimagined technical learning around what people know and what they need to learn next, rather than a fixed catalog of courses. Developed an AI-driven, skills-based model that reshaped the product roadmap and guided new experiences approaching production.
- Exploring new approaches to autonomous vehicle and robotics training, replacing complex engineering workflows with more approachable, visual, skills-based experiences. Prototyping and validating the direction with research partners and executive leadership.
- Shaping the evolution of Amazon WorkSpaces beyond virtual desktops into a platform for agentic collaboration. Designing ways for enterprises to bring AI agents into existing applications and workflows without specialized engineering support, while keeping the experience approachable for employees and secure and accountable for IT administrators.

Google | 2020-2025

Android Phone | Product Design Lead

- Designed and shipped Call Notes, an AI-powered call summarization experience and an early exploration of bringing Gemini into phone calls.
- Built on that work to develop and prototype a unified AI interaction model for Android Phone. Rather than adding disconnected AI features, envisioned an assistant that works quietly in the background, anticipates what people need, and becomes visible at the right moments. Elements later shipped, and the underlying principles continued to guide the team's work.
- Established shared design direction across teams and helped turn accessibility into a release-blocking product quality standard.

Google X/Tidal X (20% project) | Product Design Lead

- Designed the operator experience for AI-powered agricultural robotics, helping farmers understand, monitor, and control autonomous systems without needing specialized technical knowledge.
- Worked directly with farmers to turn complex sensor data and machine behavior into practical tools for monitoring, intervention, and self-service setup.

Area 120 | Product Design Lead

- Developed the product vision and executive narrative for an AI-powered mobile video editing experience, securing leadership support and resources.

Continued →

- Built and led a three-person design team to bring the concept to life. Features from the initiative were later integrated into YouTube.

Gmail & Google Chat | Senior Product Designer

- Rethought parallel conversations in Google Chat by combining threads and quoted replies rather than treating them as competing models. The result gave people more freedom to communicate naturally while meeting enterprise collaboration needs.
- When leadership prioritized threads alone, partnered with engineers to prototype and test quoted replies independently. Shipped the experience in three months, reaching 9% of messages sent while work on threading continued.
- Helped evolve Gmail and Google Chat for enterprise customers, introducing new communication capabilities and improving messaging safety and trust.

Zume, Inc | 2018-2020

Senior Product Designer

- Designed fleet management and simulation tools for distributed delivery operations, turning complex logistics data into systems non-technical teams could confidently operate.
- Built visual planning tools that reduced routing and deployment workflows from two weeks to hours.

Zynga | 2016-2018

Senior Product Designer

- Identified an opportunity to bring Words With Friends into everyday messaging. Developed the product direction that helped secure Apple iMessage and Facebook Messenger partnerships, bringing millions of additional players to the franchise.
- Designed player safety improvements that closed security loopholes and reduced related support tickets by more than 80%.

EDUCATION

Art Center College of Design *Master of Arts, New Media*

Art Center College of Design *Bachelor of Arts, Film & Animation*

SKILLS

Product & Design: Product vision, interaction design, prototyping, design systems, design leadership, product strategy, user research

Technology: Generative AI, agentic systems, physical AI, robotics, autonomous systems, simulation, human-AI interaction

Leadership: Cross-functional collaboration, executive communication, organizational design, team leadership, product incubation

PATENTS

Phone and Messaging Dynamic Actions
Named inventor · Google LLC · WO2026029779A1 · 2026
